

**Listing of Claims:**

1. (Currently Amended) An image reproduction apparatus comprising: which is connectable to a memory configured to record photographed image data and photographing information of the photographed image data in association with each other, [[;]] the image reproduction apparatus comprising:

5 a display;

a first display control unit configured to set a given predetermined number of display areas on the display, the display areas each being assignable to one of a plurality of different 10 image groups;

a display area selection unit configured to select from among the display areas, based on the basis of the photographing information recorded in the memory, a display area [[in]] to which an image group including the photographed image data recorded in the memory is assigned; in association with the photographing information should be displayed from the predetermined number of display areas set by the first display control unit;

20 a second display control unit configured to display in the selected display area the photographed image data of the image group assigned to in the selected display area; selected by the display area selection unit; and

25 a third display control unit configured to limit ~~a~~ the  
number of photographed image data to be simultaneously displayed  
in the selected display area to a predetermined number; and  
a fourth display control unit configured to display other  
photographed image data in the image group assigned to the  
selected display area and not included within the predetermined  
number, by changing the predetermined number of photographed  
30 image data to be simultaneously displayed in the selected display  
area, while maintaining display control of the first, second and  
third display control units.

2. (Currently Amended) ~~Am~~ The apparatus according to  
claim 1, wherein the photographing information ~~is~~ comprises  
information representing a photographing time of the photographed  
image data.

3. (Withdrawn - Currently Amended) ~~Am~~ The apparatus  
according to claim 1, wherein the photographing information ~~is~~  
comprises information representing a photographing position of  
the photographed image data.

4. (Withdrawn - Currently Amended) ~~Am~~ The apparatus according to claim 1, wherein the photographing information is comprises information representing a type of the photographed image data.

5. (Currently Amended) ~~Am~~ The apparatus according to claim 1, wherein the third display control unit includes an image selection unit configured to select ~~a~~ the predetermined number of photographed image data having early earliest photographing times from the plurality of photographed image data to be displayed in the same display area, and an image display unit configured to simultaneously display, in the selected display area, the predetermined number of photographed image data selected by the image selection unit.

5. (Withdrawn - Currently Amended) ~~Am~~ The apparatus according to claim 1, wherein the third display control unit includes an image selection unit configured to select ~~a~~ predetermined number of arbitrary photographed image data from the plurality of photographed image data to be displayed in the same display area up to the predetermined number, and an image display unit configured to simultaneously display, in the selected display area, the predetermined number of photographed image data selected by the image selection unit.

7. (Currently Amended) ~~An~~ The apparatus according to claim 1, wherein the third display control unit limits the predetermined number of photographed image data to be simultaneously displayed in the display area to one.

Claims 8-10 (Canceled).

11. (Currently Amended) ~~An~~ The apparatus according to claim 1, further comprising a display area designation unit configured to designate an arbitrary display area of the predetermined given number of display areas, and an image processing unit configured to execute predetermined image processing at once for a plurality of photographed image data to be displayed in the arbitrary display area designated by the display area designation unit.

12. (Withdrawn - Currently Amended) ~~An~~ The apparatus according to claim 11, wherein the display area designation unit designates a plurality of arbitrary display areas of the predetermined given number of display areas, and the image processing unit executes the predetermined image processing at once for a plurality of photographed image data to be displayed in each of the plurality of display areas designated by the display area designation unit.

13. (Currently Amended) ~~An~~ apparatus according to claim 11, which further comprises comprising an image processing designation unit configured to designate a type of image processing, and ~~in which~~ wherein the image processing unit executes image processing of the type designated by the image processing designation unit at once for ~~a~~ the plurality of photographed image data.

5  
14. (Withdrawn - Currently Amended) ~~An~~ The apparatus according to claim 1, wherein the third display control unit also limits a type of photographed image data to be displayed in the selected display area.

15. (Withdrawn - Currently Amended) ~~An~~ The apparatus according to claim 14, ~~which further comprises~~ further comprising an image type designation unit configured to designate the type of photographed image data, and ~~in which~~ wherein the third display control unit limits the type of photographed image data to be displayed in the selected display area ~~based on the basis~~ of the type of photographed image data designated by the image type designation unit.

5  
16. (Withdrawn - Currently Amended) ~~An~~ The apparatus according to claim 1, wherein:

the first display control unit includes a setting unit  
configured to set a predetermined number of storage areas on a  
5 display memory,

the display area selection unit includes a selection unit  
configured to select from among the storage areas on the display  
memory, based on the basis of the photographing information  
recorded in the memory, a storage area in which the photographed  
10 image data and associated photographing information recorded in  
the memory is storables, in association with the photographing  
information should be stored from the predetermined number of  
display areas set on the display memory by the first display  
control unit,

15 the second display control unit includes a storage control  
which stores the photographed image data in the selected storage  
area on the display memory, which is selected by the display area  
selection unit,

20 the third display control unit includes a limiting unit  
configured to limit the number of photographed image data to be  
simultaneously stored in the storage area, and

25 the apparatus further comprises an image file generation  
unit configured to generate one image file data by using the  
photographed image data stored on the display memory by the  
first, second, and third display control units and the display  
area selection unit.

17. (Withdrawn - Currently Amended) ~~An~~ The apparatus according to claim 16, wherein:

the display displays the photographed image data stored on the display memory by the first, second, and third display control units and the display area selection unit,

5 the apparatus further comprises a generation instruction unit which instructs generation of the image file data by the image file generation unit, and when instruction by the generation instruction unit is issued in a state wherein the 10 photographed image data is displayed on the display, the image file generation unit generates the image file data.

18. (Withdrawn - Currently Amended) ~~An~~ The apparatus according to claim 16, wherein the memory records the image file data generated by the image file generation unit.

19. (Withdrawn - Currently Amended) ~~An~~ The apparatus according to claim 16, further comprising a transmission unit which transmits the image file data generated by the image file generation unit to an external device.

20. (Currently Amended) ~~An~~ The apparatus according to  
claim 1, further comprising:

a display area designation unit configured to designate an  
arbitrary display area of the ~~predetermined~~ given number of  
5 display areas[[],], and

a ~~fourth~~ fifth display control unit configured to  
simultaneously display, on the display, a plurality of  
photographed image data including the photographed image data  
which are limited by the third display control unit and are not  
10 displayed, in the arbitrary display area designated by the  
display area designation unit.

21. (Currently Amended) ~~An~~ The apparatus according to  
claim 20, further comprising:

an image selection unit configured to select an arbitrary  
photographed image data from the plurality of photographed image  
5 data simultaneously displayed on the display by the ~~fourth~~ fifth  
display control unit, and

a fifth ~~sixth~~ display control unit configured to display, on  
the display, an enlarged image of the arbitrary photographed  
image data selected by the image selection unit.

22. (Currently Amended) An the apparatus according to  
claim 1, which further comprises comprising an image sensor  
configured to sense an object image and outputs output  
photographed image data, and in which wherein the memory records  
5 the photographed image data output from the image sensor.

23. (Currently Amended) An image reproduction apparatus  
comprising: which is connectable to a memory configured to record  
a plurality of photographed image data, [[;]] the image  
reproduction apparatus comprising:

5       a display;  
          a classification unit configured to classify the plurality  
of photographed image data recorded in the memory into a  
plurality of different groups in accordance with a predetermined  
condition;

10       a first display control unit configured to simultaneously  
display, on the display for each group, the plurality of  
photographed image data classified into the plurality of  
different groups by the classification unit;

15       a second display control unit configured to limit the a  
number of photographed image data to be simultaneously displayed  
in each group to one a predetermined number; and

          a third display control unit configured to sequentially  
switch the photographed image data displayed in each group to

display, on the display, a plurality of photographed image data  
20 included in the same group display other photographed image data  
included in each group and not displayed within the predetermined  
number of simultaneously displayed photographed image data, by  
changing the predetermined number of photographed image data to  
be simultaneously displayed in each group, while maintaining the  
25 display control of the first and second display control units.

24. (Withdrawn - Currently Amended) An The apparatus  
according to claim 23, which further comprises comprising an  
instruction unit configured to manually instruct change of the  
photographed image data displayed on the display, and in which  
5 wherein when the instruction unit instructs change of the display  
displayed photographed image data, the third display control unit  
switches the display to the a next photographed image data.

25. (Withdrawn - Currently Amended) An The apparatus  
according to claim 23, which further comprises comprising a group  
designation unit configured to designate an arbitrary group, and  
in which wherein the third display control unit sequentially  
5 switches the photographed image data included in the arbitrary  
group designated by the group designation unit to display the  
plurality of photographed image data included in the same  
arbitrary group.

Claims 26-31 (Canceled).

32. (Currently Amended) An image reproduction method comprising steps of:

a first display control step of setting a predetermined given number of display areas on a display, the display areas each being assignable to one of a plurality of different image groups;

a display area selection step of selecting from among the display areas, based on the basis of photographing information recorded in a memory, a display area in to which an image group including photographed image data recorded in the memory in association with the photographing information is assigned; should be displayed from the predetermined number of display areas;

a second display control step of displaying, in the selected display area, the photographed image data of the image group assigned to in the selected display area; and

a third display control step of limiting the a number of photographed image data to be simultaneously displayed in the selected display area to a predetermined number; and

a fourth display control step of displaying other photographed image data in the image group assigned to the

selected display area and not included within the predetermined number, by changing the predetermined number of photographed image data to be simultaneously displayed in the selected display area, while maintaining the display control of the first, second and third display control steps.

25 33. (Currently Amended) A computer readable medium having recorded thereon a computer readable program which causes a computer of for controlling an image reproduction apparatus to execute:

5 processing for a first display control step of setting a predetermined given number of display areas on a display, the display areas each being assignable to one of a plurality of different image groups;

10 processing for a display area selection step of selecting from among the display areas, based on the basis of photographing information recorded in a memory, a display area in to which an image group including photographed image data recorded in the memory in association with the photographing information is assigned; should be displayed from the predetermined number of display areas;

15 processing for a second display control step of displaying, in the selected display area, the photographed image data of the image group assigned to in the selected display area; and

processing for a third display control step of limiting the  
20 a number of photographed image data to be simultaneously  
displayed in the selected display area to a predetermined number  
and  
a fourth display control step of displaying other  
photographed image data in the image group assigned to the  
25 selected display area and not included within the predetermined  
number, by changing the predetermined number of photographed  
image data to be simultaneously displayed in the selected display  
area, while maintaining the display control of the first, second  
and third display control steps.
